Lahore, Pakistan | Open to Remote Roles

Profile

Senior Full-Stack Engineer with 6+ years architecting high-throughput Node.js APIs and scalable enterprise frontend systems across Angular (v14–18 / Signals) and React. Proven track record directing complex enterprise migrations, designing high-concurrency database models (MongoDB, PostgreSQL, Redis), and optimizing web vitals latency by 25%. Expert in reactive state management, real-time event streaming, and delivering resilient distributed web architectures for global clients.

WORK EXPERIENCE

Independent Engineer, Lead Full-Stack Consultant 04/2026 – Present | Remote

- Architected a unified multi-platform ecosystem across React, Angular, and Node.js microservices, powering 3+ high-traffic client platforms handling 50k+ daily active users from a single modular architecture.
- Optimized and indexed multi-tenant MongoDB schemas, reducing p95 query latency by **35%** and achieving real-time data synchronization between distributed frontends and backend services.
- Boosted platform stability to **99.9% uptime** by authoring an automated testing suite (unit, integration, and E2E) that captured complex asynchronous edge cases before production release.

Websays, Senior Frontend Engineer 04/2024 – 03/2026 | Long-term Fractional

- Slashed initial application bundle size and decreased initial load time by **25%** by migrating legacy modules to lazy-loaded standalone components and optimizing DOM rendering passes.
- Built high-throughput data visualization dashboards streaming across **150+ metrics**, maintaining 60 FPS UI performance during high-volume social monitoring spikes.
- Reduced server polling overhead and API round-trips by **40%** by engineering low-latency WebSocket alerting pipelines and an in-memory RxJS caching layer.

Devstudio International, Lead Angular Engineer 09/2024 – 12/2024 | Short-Term Contract

- Spearheaded the complete platform migration of Hoopiz from Angular 12 to 18, eliminating technical debt across **100+ components** with zero downtime or regressions.
- Replaced complex, legacy state machinery with Angular Signals, resolving **40+ critical client-reported risk blockers** and cutting state-related calculation latency.
- Redesigned high-density financial ledgers (credit exposure, aging balance tables), boosting module rendering speed by **20%** and improving user task completion rates by **15%**.

IdeaToLife, Angular & Full-Stack Developer 09/2021 – 03/2024 | Remote

- Delivered client-side architecture across **5+ enterprise platforms**, maintaining a **100% on-time milestone delivery record** across continuous two-week Agile sprints.
- Engineered reusable UI design systems and state-driven RBAC authentication libraries, reducing frontend feature delivery time by **30%** across engineering teams.
- Cut client-reported UI defects by **25%** by enforcing strict TypeScript boundaries, cross-browser compatibility checks, and WCAG accessibility standards.

Aquila Techs, Frontend Developer 07/2021 – 02/2022 | Part-Time Engagement

- Demonstrated proficiency in a diverse tech stack, encompassing HTML, CSS, and JavaScript, to create visually appealing and highly functional user interfaces on their meal prep app.
- Led the development of dynamic and feature-rich web applications using the Angular framework.

NumtraAI, MEAN Stack Developer

01/2020 – 08/2021 | Onsite

- Engineered the interactive drag-and-drop canvas for a visual AutoML platform, enabling non-technical users to build end-to-end ML training pipelines **3x faster**.
- Designed high-performance Node.js/Express APIs and MongoDB schemas, reducing model telemetry ingestion latency by **25%** during live training evaluation runs.
- Integrated downstream data pipelines with MLFlow and Apache Airflow, automating model metric logging across **10+ machine learning workflows**.

Projects

Hoopiz— Credit Management & Risk Intelligence Platform

Led platform overhaul from Angular 12 to 18; refactored financial risk engines and live credit exposure tracking dashboards, cutting initial load times by 25%.

(Angular 18 · Signals · RxJS · Fintech)

MediStock

Engineered proximity search utilizing Redis GEO queries and atomic Lua scripts for zero-race-condition inventory holds. Built automated background queues with BullMQ to reclaim expired reservation locks.

(Fastify · Redis (GEO) · PostgreSQL · BullMQ · React)

SmartSplit

Developed a debt-simplification graph algorithm utilizing integer-cent arithmetic to eliminate floating-point drift. Implemented live expense synchronization over SSE with Angular Signals reactivity.

(Angular 18 · Signals · Node.js · MongoDB · SSE)

MockFlow

Built dynamic API mock sandbox engine driven by OpenAPI specifications, featuring a deterministic network chaos simulator and live telemetry dashboards.

(Fastify · Redis · Angular 19 · WebSockets)

EDUCATION

Bachelor's in Computer Science (BS CS), FAST NUCES, Lahore.

2015 – 2019

Intermediate in Computer science (ICS), Kinnaird College for Women.

2013 – 2015

SKILLS

Frontend Architecture: Angular (v14–18, Standalone, Signals), React, TypeScript, Angular Signals, RxJS, NgRx, Redux, Tailwind CSS, Micro-Frontends, HTML5/CSS3/Sass, PrimeNG/Kendo UI.

Backend & API Engineering: Node.js, Express, RESTful APIs, WebSockets, JWT/Auth, Microservices Patterns.

Databases & Data Modeling: MongoDB, PostgreSQL, Azure Cosmos DB, Redis, Mongoose, Schema Optimization.

Cloud & DevOps: GCP, Microsoft Azure, AWS S3 & Core Services, Docker, CI/CD Pipelines, Git.

Architecture & Best Practices: Enterprise Framework Migrations, Multi-Tenant SaaS, Performance Tuning, Lazy Loading, Cross-Browser Compatibility, Agile/Scrum.

Tools & Workflow: Jira, Trello, Figma, Postman, VSCode, Chrome DevTools.
